

Ali Khosravi

AI DEVOPS LEAD

SUMMARY

AI DevOps Lead specializing in Kubernetes-based AI infrastructure, model serving, and automated deployment platforms. I currently focus on building and operating vLLM clusters and ensuring development environments can be deployed alongside scalable inference infrastructure through Kubernetes and GitLab CI/CD.

CERTIFICATIONS

AWS Certified Solutions Architect Associate

Hashicorp Verified: Terraform Associate

Certified Kubernetes Administrator (CKA)

SKILLS

Helm

Terraform

Kubernetes

Docker

Gitlab

Jenkins

Linux

Ansible

ECS, EKS

Python

Bash, Shell Scripting

Packer

Elasticsearch/Kibana

Grafana, Prometheus

Cloudwatch

EDUCATION

BACHELOR'S DEGREE - 3.8 GPA

Computer Science

Georgia Tech

2015-2019

EXPERIENCE

AI DEVOPS LEAD

Pienso / November 2020 – November 2025

- Deploying and operating vLLM clusters and configuring open-source AI models for internal AI workflows
- Building monitoring and observability across AI and application infrastructure using Prometheus, Grafana, Loki, and OpenObserve
- Implementing company-wide Tailscale infrastructure through Terraform, allowing developers to securely access development boxes while enabling GitLab pipelines to reach private servers and Kubernetes clusters
- Migrating MinIO workloads to SeaweedFS and eliminating critical security vulnerabilities
- Migrating container infrastructure to Google Artifact Registry and implementing authentication across Jenkins, K3s, and GKE
- Improving infrastructure security, including preventing Terraform-managed database credentials from leaking into CI/CD logs

SENIOR DEVOPS ENGINEER

Salucro / November 2020 – November 2025

- Led CI/CD modernization by migrating complex Jenkins pipelines to GitLab, improving deployment speed and maintainability
- Developed reusable GitLab templates for microservice deployments, reducing pipeline duplication and onboarding time
- Centralized and refactored Terraform modules for security groups, ECS, and VPCs, cutting config drift and support load
- Spearheaded full Nexus migration (Maven, Docker, NPM, Helm, PyPI) with custom Python scripts, preserving CI/CD integrity

DEVOPS ENGINEER

ADP / May 2017 – November 2020

- Migrated microservices from on-prem to AWS EKS, improving scalability and reliability
- Built end-to-end CI/CD pipelines using Jenkins, GitHub, and AWS CLI
